FDV304P : RDS = 1.5 Ohms

FDV303N : RDS = 0.6 Ohms

On one LED :

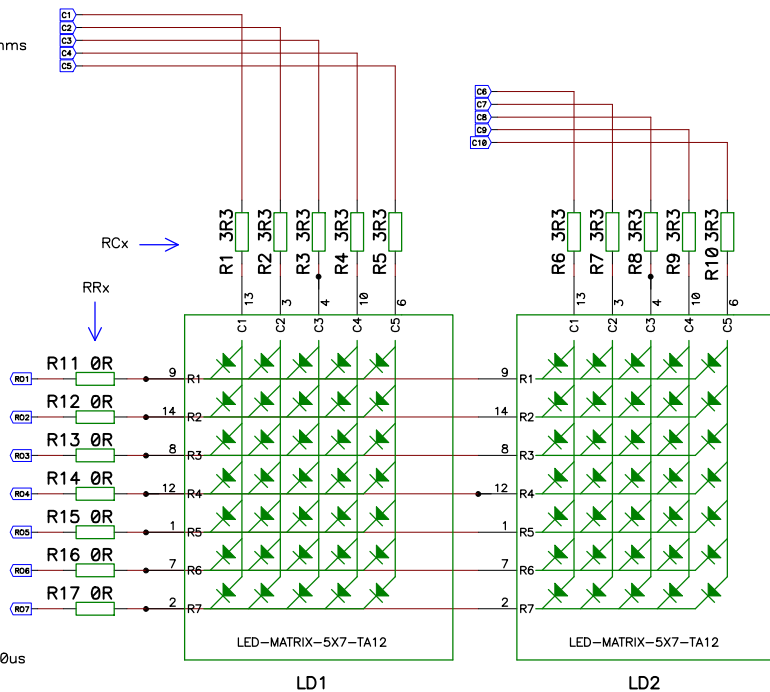

Peak Forward Current = 150mA for t < 10us  
 At 150mA -> Vf = 3.5V  
 As we are working on 3.3V power source,  
 we cannot drive the maximum current.

FOR a 20mA by LED

max current by ROW =  $10 \times 0.02A = 0.2A$   
 max current by COLUMN =  $7 \times 0.02A = 0.14A$   
 max current of the matrix =  $10 \times 7 \times 0.02A = 1.4A$   
 At 20mA VF= 2.15V (Forward Voltage of one LED)  
 $RCx = ( 3.3V - (0.02A \times 7 \times 1.5) - (0.02A \times 10 \times 0.6) - 2.15V ) / 0.14A$   
 $RCx = 0.82V / 0.14A = 5.86 \text{ ohms}$   
 RCx real = 5R6

NOTE : The serial resistor is highly depending on the FET-P and FET-N Type.

RRx with RCx = 0 Ohm  
 $RRx = ( 3.3V - (0.02A \times 7 \times 1.5) - (0.02A \times 10 \times 0.6) - 2.5V ) / 0.2 = 2.35 \text{ ohms}$   
 RCx with RRx = 0 Ohm  
 $RCx = ( 3.3V - (0.02A \times 7 \times 1.5) - (0.02A \times 10 \times 0.6) - 2.5V ) / 0.14 = 3.35 \text{ ohms}$   
 We take 3.3 Ohms for RCx and 0 Ohm for RRx

FOR a 10mA by LED

max current by ROW =  $10 \times 0.01A = 0.1A$   
 max current by COLUMN =  $7 \times 0.01A = 0.07A$   
 max current of the matrix =  $10 \times 7 \times 0.01A = 0.7A$   
 At 10mA VF= 2.05V (Forward Voltage of one LED)  
 $RCx = ( 3.3V - (0.01A \times 7 \times 1.5) - (0.01A \times 10 \times 0.6) - 2.05V ) / 0.07A$   
 $RCx = 1.53V / 0.07A = 21.85 \text{ ohms}$   
 RCx real = 22R  
 IF one LED on one COLUMN is driven:  
 LEDcurrent will be  $3.3V - 2.2V / ( 1.5 + 22 + 0.6 ) = 0.62mA$

STATIC USE :

$I_{max} = 30mA \rightarrow V_f = 2.1V$   
 $RCx = (3.3V - 2.1V) - 30mA \times (1.5 + 0.6) / 30mA = 37.4 \text{ Ohm}$

DYNAMIC USE :

$I_{max} = 150mA \text{ for max } T = 10\mu s \rightarrow V_f = 2.5V$   
 $RCx = (3.3V - 2.5V) - 150mA \times (1.5 + 0.6) / 150mA = 3.23 \text{ Ohm}$

1. RRx

RRx are the current limiter by Row and for the FDV303N.  
 The FDV303N can drive IDS max 500 mA.  
 This current is corresponding with the max current on a Row.  
 $RRx = 3.3V - 2.35V - (1.5 \text{ Ohm} \times 500mA) - (0.6 \text{ Ohm} \times 500mA) / 500mA = 1.15 \text{ Ohm}$   
 WE TAKE 1R5 FOR RRx

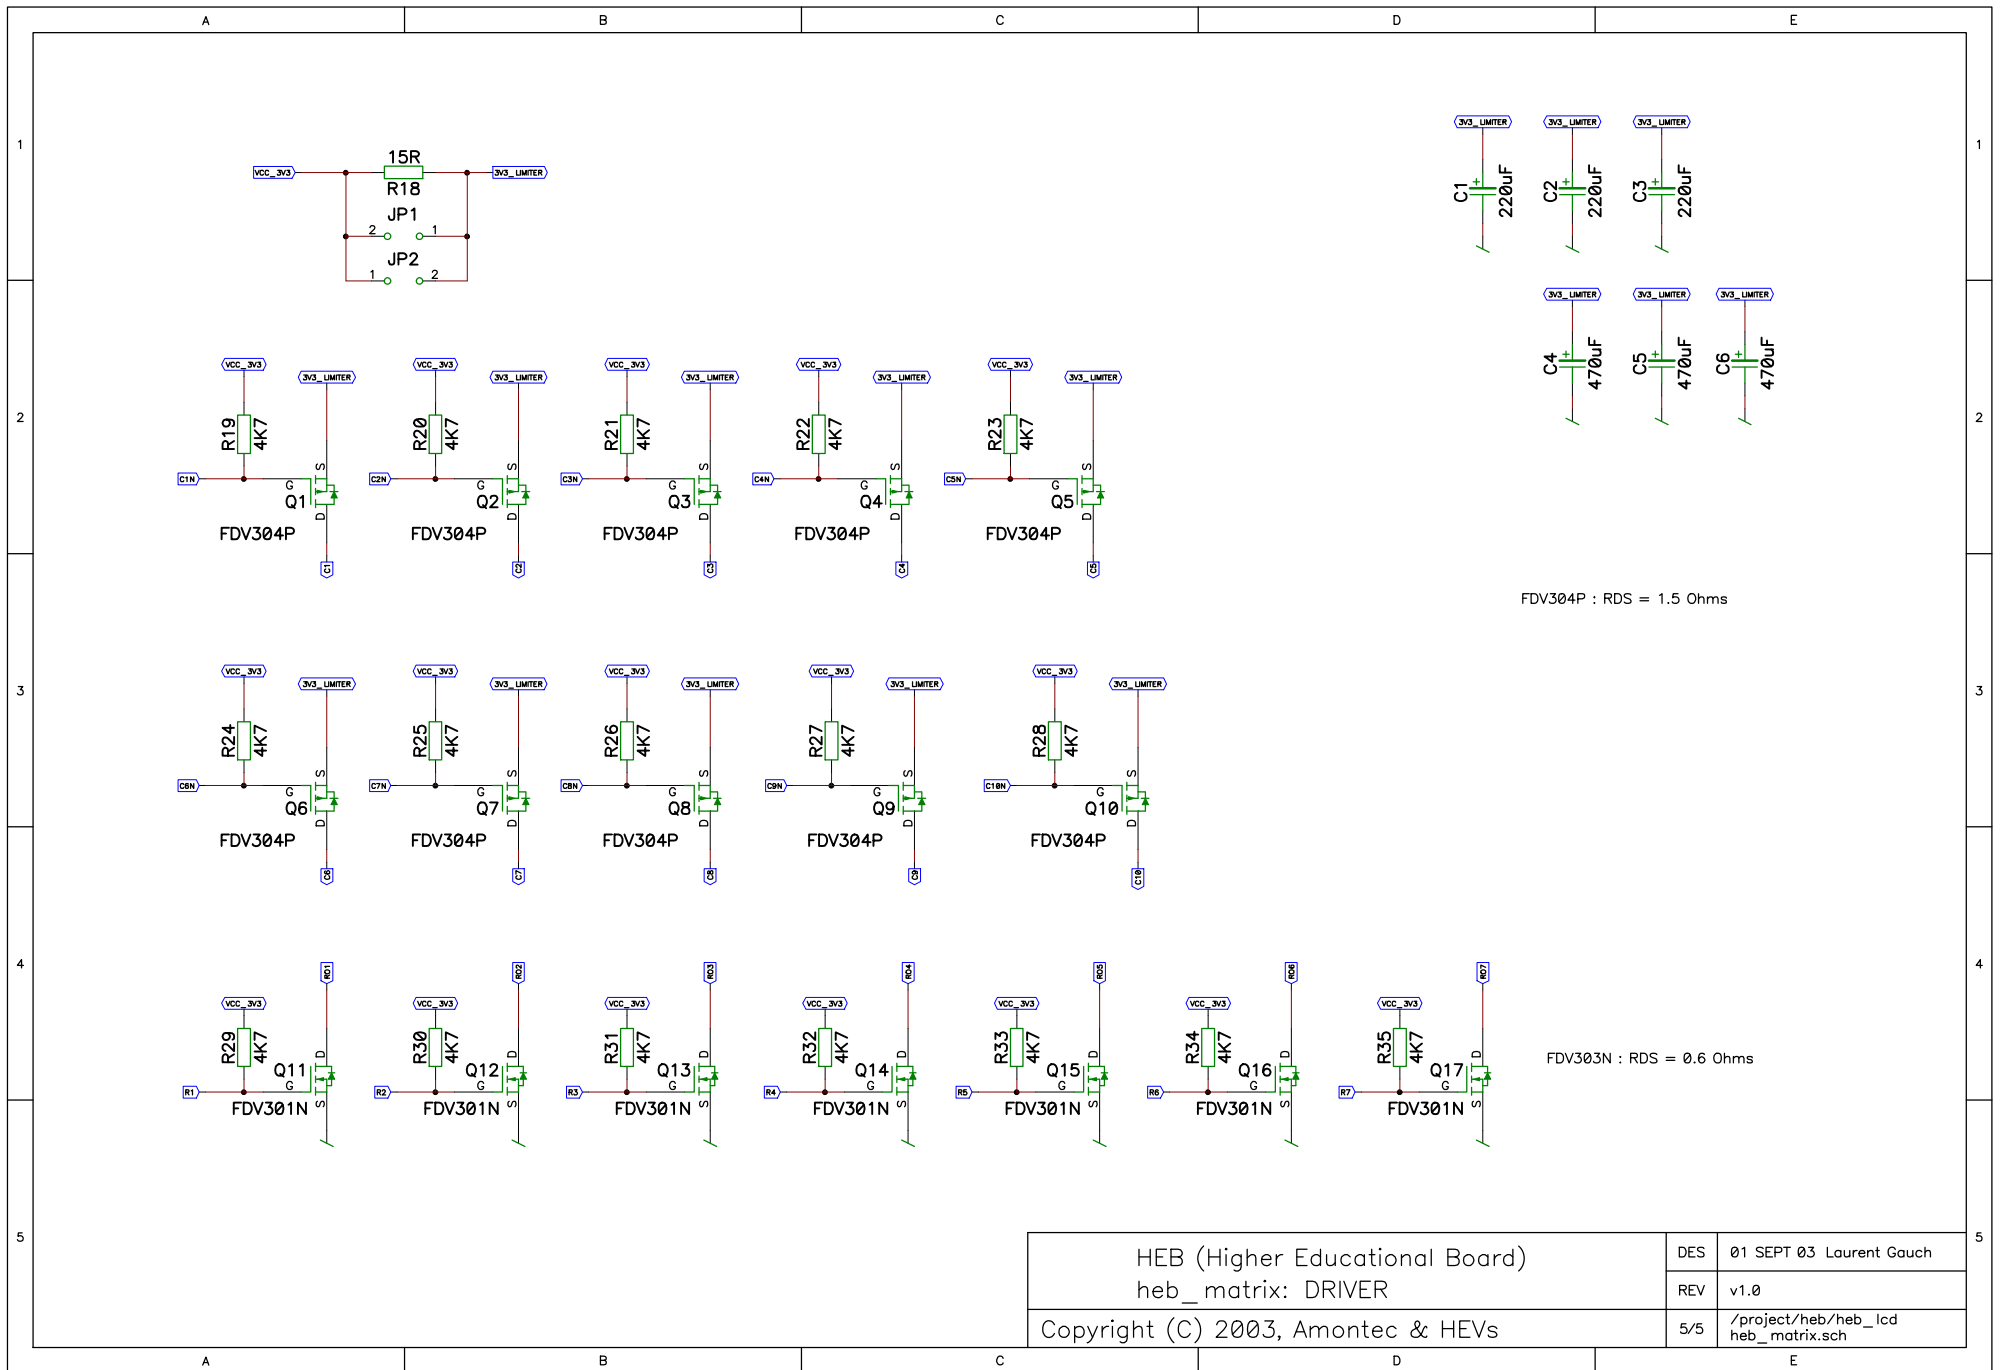

1. RCx

RCx are the current limiter by Column and for the FDV304P.  
 The FDV304P can drive IDS max 500 mA.  
 But the maximum dynamic current on one led can be 150 mA by LED, for a 10us pulse  
 $RCx = 3.3V - 2.5V - ((1.5 + 0.6 + 1.5) \times 150mA) / 150mA = 1.75 \text{ Ohm}$   
 WE TAKE 1R5 FOR RCx

1. Static Current limiter option

$R_p = 3.3V - 2.35 - ((1.5 + 1.5 + 1.5 + 0.6) / 50 \text{ mA}) / 50 \text{ mA} = 13.9 \text{ Ohm}$   
 WE TAKE 15R FOR Rp
